ANNUAL DESCRIPTIVE CATALOGUE BULBS

AND OTHER

FLOWERING ROOTS,

With Directions for their Culture and Management,

OFFERED BY

JAMES M. THORBURN & Co.

Growers and Importers of Bulbs,

15 JOHN ST., NEW YORK.

Orders for BULBS should be forwarded from September to November, inclusive. In open Winter, or at the South, they may be planted as long as the ground can be worked.

All orders sent before the first of October will be sure to be filled; after that time the supply of many sorts frequently becomes exhausted.

TYE'S STYLE HYACINTH GLASS.

ORDINARY HYACINTH GLASS.

HYACINTH GLASSES.

GREEN, BLUE AND VIOLET 20 cents each; \$1.50 per doz.
 TYE'S STYLE, various colors..... 25 " 2.00 "
 OTHER STYLES FROM \$2.50 to \$5 per dozen.

CROCUS POTS.

HEDGE HOGS, various colors and sizes... from \$1.50 to \$3 50
 BEE HIVES, " " " " 1.50 to 2.00
 COLUMNS, " " " " each 4 00
 &c., &c., &c.

WE PUBLISH DURING THE YEAR:

Catalogue of VEGETABLE, AGRICULTURAL, TREE and FLOWER SEEDS, *ready in January.*

Catalogue of FRENCH HYBRID GLADIOLUS, and other *Spring* Bulbs, *ready in February.*

Catalogue of DUTCH BULBOUS ROOTS, with *Directions for* their Management, *ready in September.*

✍️ *TRADE LISTS of the above for Seed Merchants, published in January, May, August and October.*

CLEMATIS COCCINEA,

Beautiful, hardy, bright scarlet Clematis plants, 30c. each, \$3.00 per dozen.

Entered according to Act of Congress, in the year 1882, by

JAMES M. THORBURN & CO.,

In the office of the Librarian of Congress at Washington, D. C.

BEAUTIFUL COLLECTIONS OF *BULBOUS ROOTS.*

☞ These Assortments are made up only of fine and standard sorts that are known to give satisfaction.

3 “ Polyanthus, Gloriosa.	50 “ Double, “ “
	50 Ranunculus Persian, “ “

\$35 Per Case.

Double Hyacinth.

Single Hyacinth.

HYACINTHS.

The preferable season for planting HYACINTHS in the open ground is in October and November, but they can be set out at any later time, as long as the ground is open and the Bulbs remain sound. The best compost for the Bulbs is the following: One-third river or sea sand, one third well rotted cow manure, and one-third good garden mold, or, where the soil is naturally light, well rotted cow manure liberally intermixed is all sufficient. The beds composed of the above compost should be well dug, to the depth of fourteen inches, and raised from two to four inches above the level of the walks, and in Winter may be covered with withered leaves, long manure, or with light earth formed of decayed leaves from the woods. They should be planted about six inches deep, and from five to six inches apart. Care must be taken not to press the soil too hard around and over the Bulbs. *To prevent mice from eating the Bulbs don't cover with litter until the ground has frozen tolerably hard.*

For the culture of HYACINTHS in pots, prepare the above compost, adding, if possible, a quantity of leaf mold. The most favorable time for planting is September, October and November. The size of the pot depends upon the number of Bulbs planted in a single one; three or four Bulbs in a pot of six or seven inches in diameter, has a rich and massive effect; one or two Bulbs in each may be planted in proportionately smaller pots—two Bulbs in each is very effective and generally preferred. In potting, each Bulb should remain two-thirds above the surface of the soil; when thus planted, water them well, to imbed the Bulbs firmly in the soil, allowing them to remain in this condition one or two days; then bury the pots in the open ground to the depth of six inches, for six weeks, in which position the preparatory root growth is made, necessary to a vigorous development of their flower scapes. After the period adverted to, take up the pots and remove them to a room not heated and not so cold as to freeze. Being exposed to the light for the first time, they are, of course, very delicate. Care should, therefore, be exercised not to place them in the direct rays of the sun for two or three days. When about ready to flower bring them to the ordinary living-room, where the warmth will soon cause them to bloom. By so bringing them out, a few at a time, you may secure a beautiful succession of flowers all Winter. They will need moderate occasional watering, until they begin to grow, when they should have an abundance of air in mild weather, and plenty of water from the saucers while in a growing state.

For culture in glasses, the Bulbs should be so placed that only the base of each touches the water; then place them, for the first ten days, in a dark but cool closet or room, to promote the starting of the roots, after which expose them to the light and air as much as possible; *avoid placing them near gas light.* The water should be changed as it becomes impure; draw the roots entirely out of the glasses, rinse off the fibres in clean water, and wash the inside of the glass well. The water should never be allowed to freeze, as it would not only burst the glass, but cause the fibres to decay. When the Bulbs are well advanced, give them a soft shower of rain-water every day. This causes the Bells to open rapidly, and enlarges the flowers. Single HYACINTHS generally succeed better in glasses than double ones, but those of the latter marked ** are also adapted for water.

 Parties unacquainted with the different varieties, by stating with their order whether wanted for pot, glass or garden culture, will do well to leave the selection to us, as they may rest assured that such selection will be made in a most judicious and liberal manner.

HYACINTHS.

The single Flowered Varieties are generally more effective than the Double ones, and, as a general rule, the former succeed better than the latter in glasses.

The Double Varieties are distinguished by an Asterisk (*).

All Single Hyacinths succeed well in water, and those of the Double ones marked thus ** are also adapted for glasses.

Double Tulips.

Single Tulips

TULIPS.

Mode of treatment is the same as for Hyacinths. Almost every variety and shade of color is now in them that was formerly to be found only in the oldest sort of Florists' varieties.

Most of these TULIPS are equally well calculated for pot culture and for the flower border. They can readily be brought forward for early bloom in the green-house, or even in the dwelling-house; and in the border they group admirably with other varieties of Early Bulbs, or form by themselves most beautiful contrasts of color, when planted in vases.

EARLY FLOWERING, or BEDDING TULIPS.

Admirably adapted for culture in pots, edgings or beds, flowering immediately after the Duc Von Thols.

PARROT TULIPS.

FOR OUT-DOOR CULTIVATION.

The petals of these have feathered edges, and in addition to other colors combine shades of green—a peculiarity confined to this class. The flowers are very singular and picturesque—large size and brilliant colors—forming very effective groups for the flower borders.

AMARYLLIS.

AMARYLLIS BELLADONNA.

AMARYLLIS ATAMASCO.

These Bulbs, which are so remarkable for their beautiful flowers, should be, most of them, cultivated in doors, and but moderately watered, unless they show indications of flowering. The soil most suitable for their culture is a good, friable, highly-decomposed turfy loam, with one-fourth part of rich leaf mold or pulverized manure and the ordinary proportion of sand in mixture. Frequent disturbance of the roots is to be particularly avoided; allow them to remain in the same pots for two or three years.

	EACH.
Atamasco (<i>Zephyranthes</i>), <i>pink and white</i>	♢ doz. \$1.00 \$0.10
Aulica (<i>Lily of the Palace</i>), <i>crimson, shaded with lively green</i>	2.00

CROCUS.

FOR POTS AND BORDERS.

An universal favorite, being one of the earliest ornaments of the Garden, neat, dwarf and compact in growth.

For flowering in Pots, Hedgehogs, Baskets, &c., they should be plunged in the open ground for three weeks after planting, precisely in the same manner as directed for Hyacinths.

CYCLAMENS.

Are among the most desirable Bulbs for Winter-house blooming; of very neat, compact habit, rich variegated foliage and unique flowers, continuing to bloom for nearly three months. They are easily cultivated in pots, and should be planted by September, and allowed to dry away in May, keeping the Bulbs in sand through the Summer.

GLADIOLUS.

The following varieties are the only sorts to be had at this season of the year, and they are generally planted in pots in Autumn, and require to be kept in a warm room or Greenhouse, except those* which are hardy and may be planted out; it is best, however, to give them a slight protection.

The FRENCH HYBRIDS, for Spring planting, will be in by November. These form a family of Bulbs of rare beauty. Every year is now adding varieties of most exquisite tint and shade; and from the time of year at which they bloom, and the long continuance of their flowers in perfection, they become one of the greatest ornaments of the Garden, at a season when flowers of vivid tint are scarce. Very valuable flowers for vases.

Descriptive Catalogue of 150 varieties ready in February.

LILIUM (Lilies).

NOT READY TILL THE 1ST TO THE 15TH OF OCTOBER.

LILIUM LANCIFOLIUM.

LILIUM CANDIDUM.

These require very little care—the principal thing, indeed, to be attended to is to forbear disturbing them too often. All these kinds when once planted should be left as long as possible untouched. The Auratum cannot bear manure; ordinary light soil suits them best. We should call particular attention to the LILIUM SPECIOSUM (Japan Lily), which are next to Lilium Auratum, the most magnificent species; and the varieties, though very distinct, are almost equally handsome. They are remarkable on account of the clear, deep rose color of their flowers, which are all rugged with rubies and garnets, and sparkle with crystal points. Lilies should be planted *deep*, not less than six inches.

LILIUM TENUIFOLIUM.

	each.	per doz.

BICOLOR HORSFIELDI NARCISSUS

RANUNCULUS.

DOUBLE RANUNCULUS.

The main soil for these should be a loam or clay with a good dressing of rotten manure and leaf mold, and if heavy a little sand. To have them in perfection the soil should be well drained, cool, deep, rich, and moist. Plant late in the Autumn, claws downward, from four to six inches apart, and three inches deep, covering with fine pulverized soil. The TURBAN sorts are more hardy, and although the same treatment is desirable, they may be dealt with in a rougher fashion.

PERSIAN SORTS.

" cœrulea } (<i>Bethlehem.</i>) }	.30	3.00	

SNOWDROPS.

Perhaps no Spring Flower is a more general favorite than the SNOWDROP. The earliest flowering of its varieties is the common Single sort, which is also very graceful and beautiful, commencing to bloom before the snow is fairly off the ground in the Spring. This is succeeded by the double-flowered variety, with its elegant drooping snow-white blossoms

	per doz.	per 100
